DETAILED ACTION

1. The amendment filed 3-6-06 is acknowledged. Claims 7 and 9 was canceled. Claims 1-6 are pending in this Application.

2. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 3-6-06 has been entered.

3. All rejections made in the previous office action and not cited herein are hereby withdrawn.

Maintained Rejections

Double Patenting

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

4. Claims 1-6 remain rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-10 of U.S. Patent No. 6,410,340. Although the

Art Unit: 1654

conflicting claims are not identical, they are not patentably distinct from each other because of the following reasons.

The claims are drawn to a immunophilin wherein it comprises a protein that has a molecular weight of 8.4 kDa, is isolated from the soluble cytoplasm of lymphoid tissue and has an N-terminal first 23 amino acid sequence according to Seq. Id. No. 1.

Applicants did not address this rejection in their response. Applicants have not submitted a properly executed terminal disclaimer to overcome the rejection.

Applicants is reminded that the instant claims are drawn to a product and the US patent claims are drawn to the same product. In fact claim 9 of the US patent claims a kit comprising a purified 8.4Kda immunophilin as defined in "claim 1." Claim 1 of the US patent defines the immunophilin as about 8.4 kDa immunophilin exhibits the following characteristics: (i) the first 23 amino acid sequence is identical to that of authentic ubiquitin; (ii) retention times on HPLC are identical to those of authentic ubiquitin; (iii) migrates on SDS-PAGE plates identically to HPLC-purified commercial ubiquitin; (iv) exhibits a Kd of about 0.8 nM for FK-506 and 0.08 nM for rapamycin; (v) has a Hill plot value of about unity; and (vi) when complexed to FK-506 inhibits calcineurin phosphatase activity. The characteristics claimed by the US patent are similar to the instant claims. Thus, even kit of claim 9 renders obvious the claimed invention.

Thus, the rejection is maintained.
